

S6 Figure: Collapsed seed structure from Triple (GT43_1+GT43_2+GT47_2) RNAi wheat lines compared to control. A representative mature seed from T7 and T8 showing a wrinkled and collapsed seed phenotype compared to the control material. Top row from left to right shows a dorsal image of a control seed, seed from T8 and seed from T7 lines. Bottom row from left to right shows a lateral seed image of the same seeds with a the distinct collapsed phenotype compared to the normal plump seed from the control material. Bar= 2mm
