The authors would like to point out an error in the sequences of both the forward and reverse primers reported in this paper (Page 325: primer design). The correct sequence of the forward primer mtSSFOR is: 5′-AGG TAA CAA GTC AGA AGA TGA TCG AAA GAG AA-3′. The reverse primer mtSSREV should be: 5′-CCT TGT TTT TAG GGA CAG GCT TAA TGC-3′.

We thank colleagues for pointing this out to us and apologize for any inconvenience.

The correct primers were used in the research and therefore the conclusions based on the applied use of these primers are not affected.

Corrigendum: characterization and expression of *Fusarium graminearum* endo-polygalacturonases *in vitro* and during wheat infection

A. Tomassini, L. Sella, A. Raiola, R. D’Ovidio and F. Favaron*

Dipartimento del Territorio e Sistemi Agro-Forestali, sez. Patologia Vegetale, Università degli Studi di Padova, Via dell’Università 16, I-35020 Legnaro, Italy

*E-mail: francesco.favaron@unipd.it

The authors would like to point out that conversion mistakes are present in Figures 1 and 3. In the y-axes of Figure 1(a) the values of viscosimetric activity should be multiplied by a factor of 25 and the values of reducing activity should be multiplied by a factor of 50. In the y-axes of Figure 3 the values of viscosimetric activity should be divided by a factor of 2.
