

A**B**

S3 Figure: A & B qPCR transcript level data for six independent GT43_1 RNAi wheat lines. Graphical representations of GT43_1 transcript levels in six independent homozygous GT43_1 RNAi *Triticum aestivum* lines compared to their Null controls. **Graph A** the data is expressed as a percentage present in the transgenic lines compared to their Null controls. In **Graph B** **Type** refers to either Transgenic or Null lines and **e.s.e** refers to estimated standard error. Least significant difference (95%) = 0.3280
